

The 4th Surgical Training Course of Center for Endoscopic Transnasal Skull Base Surgery, Nagoya City University

8th -9th August 2026

Venue

Nagoya City University Center for Innovation in Advanced Medical Technology

Course Fee: Lecture & Dissection : ¥150,000/Non-dissecting : ¥15,000

Application URL : <https://form.run/@skullbase2026>

This intensive anatomy course is designed to provide comprehensive training in endoscopic transnasal skull base surgery.

Utilizing state-of-the-art endoscopic systems and advanced surgical instrumentation, participants will gain hands-on experience and develop a detailed understanding of surgical anatomy under expert supervision.

The course emphasizes surgical precision, safety, and practical techniques directly applicable to contemporary skull base surgery.

Faculty

Tetsuji Sanuki, Motoki Tanikawa, Tadashi Watanabe, Tessei Kuruma, Jun Muto, Satoshi Yoshioka, Kazuto Takeuchi, Masayoshi Kobayashi, Kenichi Oyama, Yoshihiro Watanabe, Masahiro Tanji, Takayuki Nakagawa, Hiroyoshi Akutsu, Shuho Tanaka, Kosuke Takabayashi (Guest)

Course Outline

1. Transnasal septal approach
2. Ethmoidectomy to Modified Lothrop procedure (Draf III)
3. Anterior skull base resection
4. Pterygopalatine fossa (including the maxillary artery) and infratemporal fossa (foramen ovale)
5. Pituitary transposition and cavernous sinus approach
6. Middle cranial fossa approaches to the foramen lacerum, petrous apex, and internal auditory canal
7. Transclival approach

Organized by: Voice and Sinus Center, Nagoya City University East Medical Center

Co-sponsored by: Center for Endoscopic Transnasal Skull Base Surgery, Nagoya City University

Supported by: Department of Integrative Anatomy, Nagoya City University

The 11th Tokai Surgical Research Meeting will be held concurrently.
